

Design 1:

With this new safety seal, I changed the position as well as the shape of the tab. In the pictures above, the bottom part acts as the seal while the top part is where the user will grab and lift. The circular top part of the seal affords grasping, as well as signifies that the user should peal backwards as the seal will be in a elevated position. This top part of the seal also affords pulling back as it is attached to the bottom half of the seal
